

## SERIES : ATCAL 6001-D

Temperature Calibration in the industry is normally done by comparison Technique. The Unit being calibrated is immersed in to a stable heated medium along with a sensors of known accuracy and the reading of both are compared to find out the temperature deviation. The "DIGIMASTER" Digital Thermometers are the master thermometers used for this purpose. These thermometers replace the conventional mercury-in-Glass thermometers which are cumbersome to read, fragile and have to be frequently recalibrated. DIGIMASTERS are Digital Thermometers, Battery operated which are accurate and easy to read.
